Art Unit: 1786

DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

- 2. This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.
- 3. In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-50, 71-98, and 100-109, drawn to a polymer compound, a composition comprising the polymer compound, a solution comprising the polymer compound, and an electronic device comprising the polymer compound.

Group II, claim(s) 51-58, drawn to method of making the polymer compound.

Group III, claim(s) 59-66, 69, drawn to compounds used to make the polymer compound.

Group IV, claim(s) 67, 68, and 70, drawn to a method of making the compounds used to make the polymer compound.

Group V, claim(s) 99, drawn to method of making a film comprising the polymer compound.

- 4. The groups of inventions listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:
- 5. Groups I, II, III, IV, and V lack unity of invention because even thought the inventions of these groups require the technical feature of a polymer compound comprising a repeating unit of the following formula (1) or a monomer compound used to make polymer compound comprising a repeating unit of the following formula (1),

Application/Control Number: 10/582,394

Art Unit: 1786

Page 3

, is not a special technical feature as it does not make a contribution over the prior at Zheng et al. (US 2004/0131880) (hereafter "Zheng") and Doi et al. (US 6,444,334) (hereafter "Doi") in view of Chen et al. (US 2003/0143422) (hereafter "Chen").

6. Zheng teaches a polymer compound with the following structure,

, where R^1 and R^2 can be n-hexyl (paragraph

[0084], compound 279). This compound reads on applicant's formula (1), where A is a condensed benzene ring and B is a benzene ring. Zheng further teaches monomers used the make the above mentioned polymer (paragraph [0221]).

7. Regarding Doi in view of Chen, Doi teaches comprising a polymer with the

following repeating unit,

(column 2 lines 1-50). Doi also

teaches how the polymer with this repeating is made and the type of monomer used to make the polymer (column 19 lines 49-67).

8. Doi does not teach where the fluorene repeating unit comprises condensed benzene rings instead of benzene rings.

Art Unit: 1786

9. Chen teaches that making the benzene groups in fluorene compounds condensed benzene groups one can make a compound that is non-planar (paragraph [0020]). Chen teaches this non-planar structure leads to materials suppressing excimer formation because the pi-orbitals of adjacent emitting molecules cannot interact with one another (paragraph [0020]).

- 10. It would have been obvious to one of ordinary skill in art at the time the invention was made to modify the fluorene repeating unit in Doi, so the benzene groups where condensed benzene groups leading to a polymer that is not planar. The motivation would have been to make a polymer that suppresses excimer formation.
- 11. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.
- 12. If applicant selects Group I, the applicant must select one of the following species. The species are as follows:

13. Linear or branched polymer comprising repeating unit formula (1):

Species I: A linear polymer comprising repeating unit formula (1);

Species II: A branched polymer comprising repeating unit formula (1).

14. Structure of Rw and Rx:

Species I: Rw and Rx each independently represent a hydrogen atom, alkyl group, alkoxy group, alkylthio group, aryl group, aryloxy group, arylthio group, arylalkyl group, arylalkoxy group, arylalkylthio group, arylalkenyl group, arylalkynyl group, amino group, substituted amino group, silyl group, substituted

Art Unit: 1786

silyl group, halogen atom, acyl group, acyloxy group, imine residue, amido group, acid imide group, mono-valent heterocyclic group, carboxyl group substituted carboxyl group, or a cyano group;

Species II: Rw and Rx bond to form a ring.

15. Homopolymer or copolymer comprising repeating unit formula (1):

Species I: A homopolymer comprising the repeating unit formula (1);

Species II: A copolymer comprising the repeating unit formula (1).

Further if the applicant's selects Species II (A copolymer comprising the repeating unit formula (1)), the applicant must select from these species:

16. Number of additional different repeating units:

Species I: 1; Species II: 2;

Species III: 3.

17. Structure of the different repeating units, this may be more than one different species if the number of different repeating units is more than 1:

Species I: Formula (1-1);
Species II: Formula (1-2);
Species III: Formula (1-3);
Species IV: Formula (1-4);
Species V: Formula (7);
Species VI: Formula (8);

Species VI: Formula (9);

Art Unit: 1786

Species VIII: Formula (10);

Species IX: Formula (11);

Species X: Formula (12);

Species XI: Formula (13).

18. Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

19. Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise require all the limitations of an allowed generic claim. Currently, the following claim(s) are generic: 1, 3-12, 17-19, 71-98, and 100-109.

REQUIREMENT FOR UNITY OF INVENTION

20. As provided in 37 CFR 1.475(a), a national stage application shall relate to one invention only or to a group of inventions so linked as to form a single general inventive concept ("requirement of unity of invention"). Where a group of inventions is claimed in a national stage application, the requirement of unity of invention shall be fulfilled only when there is a technical relationship among those inventions involving one or more of the same or corresponding special technical features. The expression "special technical

features" shall mean those technical features that define a contribution which each of the claimed inventions, considered as a whole, makes over the prior art.

21. The determination whether a group of inventions is so linked as to form a single general inventive concept shall be made without regard to whether the inventions are claimed in separate claims or as alternatives within a single claim. See 37 CFR 1.475(e).

WHEN CLAIMS ARE DIRECTED TO MULTIPLE CATEGORIES OF INVENTIONS

- 22. As provided in 37 CFR 1.475(b), a national stage application containing claims to different categories of invention will be considered to have unity of invention if the claims are drawn only to one of the following combinations of categories:
- (1) A product and a process specially adapted for the manufacture of said product; or
 - (2) A product and process of use of said product; or
- (3) A product, a process specially adapted for the manufacture of the said product, and a use of the said product; or
- (4) A process and an apparatus or means specifically designed for carrying out the said process; or
- (5) A product, a process specially adapted for the manufacture of the said product, and an apparatus or means specifically designed for carrying out the said process.

Application/Control Number: 10/582,394

Art Unit: 1786

23. Otherwise, unity of invention might not be present. See 37 CFR 1.475(c).

Page 8

- 24. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.
- 25. The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected invention or species.
- 26. Should applicant traverse on the ground that the inventions have unity of invention (37 CFR 1.475(a)), applicant must provide reasons in support thereof.

 Applicant may submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case.

 Where such evidence or admission is provided by applicant, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Application/Control Number: 10/582,394

Art Unit: 1786

27. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Page 9

- 28. The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and the product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise require all the limitations of the allowable product claim will be considered for rejoinder.

 All claims directed to a nonelected process invention must require all the limitations of an allowable product claim for that process invention to be rejoined.
- 29. In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103 and 112. Until all claims to the elected product are found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowable product claim will not be rejoined. See MPEP § 821.04(b). Additionally, in order to retain the right to rejoinder in accordance with the above policy, applicant is advised that the process claims should be amended during prosecution to require the limitations of the product claims. **Failure to do so may result**

Art Unit: 1786

in a loss of the right to rejoinder. Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.

Conclusion

- 30. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Andrew K. Bohaty whose telephone number is (571)270-1148. The examiner can normally be reached on Monday through Thursday 7:30 am to 5:00 pm EST and every other Friday from 7:30 am to 4 pm EST.
- 31. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, D. Lawrence Tarazano can be reached on (571)272-1515. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
- 32. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
